PROFESSIONAL SUMMARY

Data professional building data skills for 4+ years, starting with freelance statistical analysis for academic research (BSc/Master's-level thesis support) before moving into 2+ years of fintech and microfinance experience at Carbon Microfinance Bank, spanning finance support/reconciliation and BI development. Currently a BI Developer at Carbon Microfinance Bank, building automation systems and dashboards across fraud detection, KYC compliance, and business reporting. Proficient in SQL, Python, Google Cloud (BigQuery), Looker, Power BI, and Retool. Currently developing data engineering skills, including Airflow and dbt for pipeline orchestration and transformation.

TECHNICAL SKILLS

Languages & Querying: SQL, Python

BI & Visualisation: Looker / Looker Studio, Power BI, Tableau

Automation & Engineering: Retool, Airflow, dbt, Google Cloud (GCS, BigQuery)

WORK EXPERIENCE

Settlement & Reconciliation Analyst / Finance Support | Carbon Microfinance Bank *August 2024 – Nov 2025*

- Conducted daily settlement reviews and reconciliation across all payment channels, resolving third-party discrepancies and escalating switch exceptions to providers within SLA
- Reviewed and reconciled third-party settlement reports and bank accounts, investigating and resolving customer and merchant disputes in line with SLA
- Provided support for financial reporting and reconciliation, including end-of-month reporting
- Posted and reconciled loan disbursements and repayments, ensuring ledger accuracy across collections and product teams
- Automated reconciliation and bookkeeping processes, cutting daily processing time by 80% — from 1 hour to under 10 minutes
- Collaborated closely with the BI team to ensure data consistency and integrity across settlement and reconciliation records, bridging financial operations with data infrastructure

BI Developer & Automation | Carbon Microfinance Bank *Nov 2025 – Present*

- Build and deploy production automation workflows in Retool connecting Zoho CRM, BigQuery, and internal communication channels — automating fraud alerts, KYC compliance flags, and customer service ticket resolution
- Design multi-step automated decision pipelines for the compliance team: pulling tickets via API, cross-referencing BigQuery records, and automatically closing tickets or sending structured comments based on KYC and account status
- Automate customer service responses on Zoho based on ticket subject and content classification, enabling the CS team to resolve issues without manually opening customer accounts
- Build and maintain BI dashboards in Looker and Looker Studio connected to BigQuery, providing real-time visibility into fraud, KYC compliance, loan performance, and customer activity for leadership
- Designed SQL view logic using window functions to power growth-tracking metrics on dashboards, enabling teams to monitor period-over-period business growth
- Optimise large-scale BigQuery queries for marketing and collections teams — reducing data scan size, improving processing speed, and cutting query costs through partitioning and query restructuring
- Serve as a central data resource across the business, providing data pulls and analysis for financial reporting, audit and compliance, and product insight requests
- Investigate and resolve data integrity discrepancies across repayment and settlement records by cross-referencing multiple BigQuery sources, escalating systemic issues to engineering

EDUCATION

Bachelor of Science in Education: Mathematics, Science and Education

Federal University, Oye-Ekiti · January 2023
